

REAL SIMPLE

ideas

CURVES OF STEEL
Leave spoon-bending tricks to psychics and magicians. For a more amazing feat, breathe new life into mismatched and old flatware by turning it into—ta-da!—useful hooks.

do it yourself: 3 steps

Silverware that won't see a table anytime soon finds a new purpose on a wall.

1. DRILL

Use a titanium or cobalt drill bit (or another type for drilling metal) to bore a small hole in the handle of the utensil.

2. BEND

Thin silver is malleable, and a heat gun or a hair dryer makes forming U-shapes even easier.

3. NAIL

Attach the hooks to the wall with a hammer and a nail. Take care to hang only lightweight items from the hooks.

The Real Simple Challenge

Your assignment is to reproduce this content as a web page and make it as accurate as possible. I have provided all the images including a psd file of the original so you can read the small type. Notice the type color and style and especially the layout. It will require the use of floats to position the content. Start by imagining or sketching the structure for the site and use the structural html5 tags we've been working with. There are lots of different ways to solve this layout problem. Keep it as simple as possible. This exercise will help you prepare for the midterm which will require a similar process. Good luck!

Note: You may use absolute, relative or floats for positioning.
